

Waterco Far East Residential water filter

Kuala Lumpur, Malaysia

Healthy water on tap with Waterco

In many places around the world, affordable clean water is not available for drinking and everyday tasks, making safe sanitation during the COVID-19 pandemic virtually impossible—especially in densely populated cities like Kuala Lumpur, Malaysia.

No other water filtration company understands this more than Waterco. Our manufacturing plant is located in Selangor, Malaysia where we have designed, engineered and exported products all over the world.

“The demand for high-quality water filtration is critical in Malaysia due to water disruption supply and ongoing pollution issues that have haunted the Klang Valley and throughout the country over the past few years,” says Waterco Regional Business Development Manager Zao Cheong Koo.

“ *Clean water is available from every tap in the house.*

Waterco filters can operate up to 7 bar pressure rating, are hydraulically efficient and can be customised according to customer requirements. ”

WATERCO
water, the liquid of life

Waterco Limited (ASX:WAT) pioneers reliable solutions for healthy, safe water environments, which are used in residential, commercial and industrial applications in over 40 countries. Established in 1981, it has become a global brand recognised for designing and manufacturing filtration and sanitisation equipment for the aquatic, aquaculture, and water treatment sectors.

To ensure the health and wellbeing of the home's eight residents, and protect their water tank, the family installed Waterco's W300 high-strength water filter.

Malaysian family seeks reliable supply of clean water

Thirty minutes' drive from Waterco's manufacturing facility is the Fong family residence, which, like many others in the area, was experiencing a lack of quality water.

To ensure the health and wellbeing of the home's eight residents, and protect their water tank, the family installed Waterco's W300 high-strength water filter.

Waterco's Micron W series of residential filters require minimal maintenance and provide a number of benefits, including:

- Clear water for cooking and cleaning
- Cleaner, brighter laundry
- Refreshing baths and showers
- Extended service life of drinking water purifiers

"Clean water is now available from every tap in the house," says Mr Fong proudly.

Protect citizens from toxic contamination and water supply disruptions

Waterco recently designed a range of new filters to help combat increased river pollution and protect natural resources. These include:

- **GAC Plus** - uses activated carbon to remove dissolved organic matter, pesticides and chemicals
- **DMI Plus** - a proven, powerful catalytic water filtration media that removes iron (rust) and manganese, especially from groundwater
- **ZeoPlus** - the microporous structure of this mineral rock sourced from volcanic areas effectively removes ammonia. Zeoplus can also reduce chlorine demand in the water

"Waterco filters can operate up to 7 bar pressure rating, are hydraulically efficient and can be customised according to customer requirements," Koo explains. "Depending on the filtration media loaded into the filters, they can remove many pollutants that might present inside the water."

Waterco's Micron W series of residential filters require minimal maintenance and provide a number of benefits to the users.
